With Harness proD, we bring together these electrical schematics with the mechanical dimensions of the car, to obtain the final cable harness design

Thanks for helping us with our cable loom!

**FORMULA
ELECTRIC

Added value

Faster result

Simultaneous work for mechanical and electrical

Complete virtual twin

More details on production drawing

Everything digital, not from empty page next year

More fun

Nice collaboration between mechanical and electrical

ENGINEERING SOFTWARE

IMPLEMENTATION

GLOBAL SUPPORT

Challenges in machine cabling

Lengths are estimated manually (or not)

No digital twin

Subsequent modifications

A lot of waste & remanufacturing

Critical areas are recognized too late

Mechanics first - then electrical engineering

No clear cable paths

Installer decides on cable laying

High coordination effort

Meetings and discussions

No 100% engineering data

Errors only visible on the prototype

Challenges in machine cabling

Cost driver - unknown length of cables!

Excess lengths -
are "hidden"

Excess lengths -
are "shortened"

Documentations -
are "supplemented"

Cable lengths -
you can't do without!

short lengths -
are "lengthened"

Special cables -
are "manufactured"

SERVO cable -
e.g. 5m, price from € 200,-
(price without stock)

! Cable lengths have a big impact on time, cost and quality!

3D design space analysis & schematic design
